

ChiSail: Real-time, localized condition reports for sailors in Chicago

Category: Reference

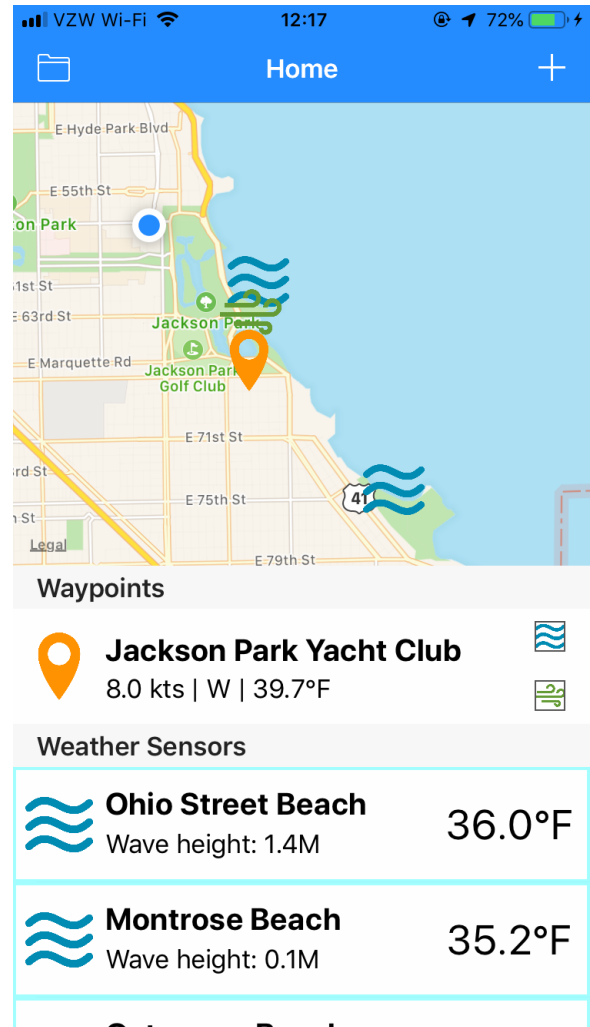

Keywords: Sailing, Sports, Boats, Lake, Weather, Chicago,
Wind, Temperature, Gust, Precipitation, Water, Waves, Sensor,
Localized, Real-Time

ChiSail combines satellite weather forecasts with the City of Chicago's network of real time weather and water sensors to give you the most complete picture of conditions that matter for sailing, including: wind speed & heading, gusts, water temperature & wave height, and more.

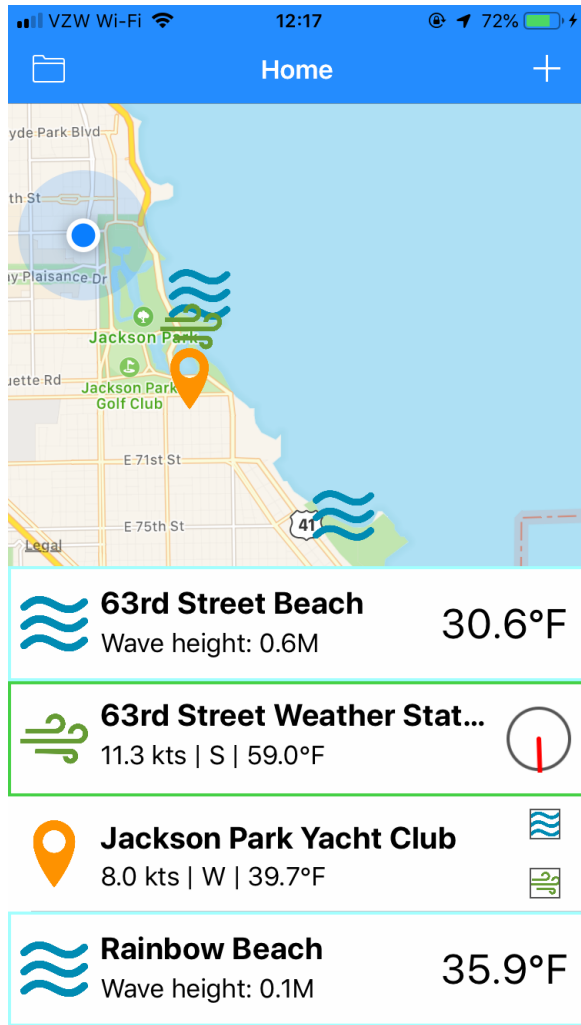

Easily customize your home screen to get quick access to the conditions that matter most to you. Get quick, visual indicators for possible sources of concern including frigid water temperatures and dangerous gusts.

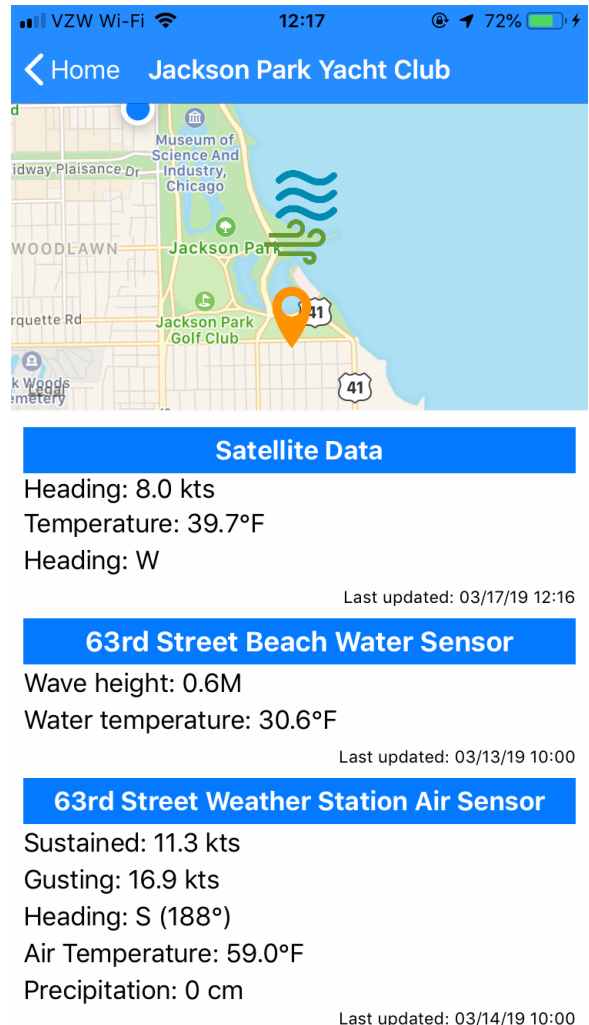

Add a new waypoint to keep tabs on the harbors that matter most to you.

View previously selected waypoints, water and weather sensors from the home screen. Ice blue visual indicators provide warnings of frigid temperatures!

Sort by proximity to see waypoints and sensors that are closest to you.

Tap on a waypoint to view the latest satellite forecast side-by-side with data from on-the-ground sensors.
